

Set up allocation carrier access

Company administrators | Quick reference guide

1. Enable the carrier

Under Set up allocation carriers, choose an existing outside carrier and select Enable limited portal allocation.

2. Use a verified account

The recipient creates and verifies a free account. Under Carrier portal access, enter that email and choose Carrier dispatcher.

3. Grant access

Choose a future expiry within 30 days, then Grant access. Share the allocation portal address directly.

Good to know

Access grants do not send an invitation. A portal URL alone does not grant access.
